# WHO ISEUROPACK?

While chasing our dreams, we create value and provide benefits. We make our work a part of our daily routine, we produce while we live, we live while we produce. We care about team awareness, sharing and cooperation, and we continue to learn every day with the excitement of the first day in order to walk confidently into the future. By combining the enormous power of knowledge with dreams, goals and experience, we adopt moderation as a principle and strive to be good for the soul of man. That's why our motto "Catch The Time" is the perfect sentence that expresses **EUROPACK** in two words, in the shortest and clearest way.

as **EUROPACK**, we know well that individuals with a healthy spirit will not suffer from any physical handicap. We design the values and products we produce by focusing primarily on serving human values and then on providing comfort by fulfilling the technical requirements.

We work with innovative principles that can add value to the society we live in, the environment and all living things with whom we share the environment, protect and protect their rights, and include us and the next generations.

We are **EUROPACK**, we set out to support you, add comfort to your life, grow and develop together, fully adhere to ethical principles and rules, and create value for the environment, all living things and humanity.

We look forward to establishing business partnerships with all our partners who share the same excitement as us on this journey, to be inspired by your ideas and to benefit from your experience.

# WE TOUCH & CARE

WHAT  
WE  
DO

## FROM RAW METARIAL TO PEOPLE

***Our aim is to give the highest importance to provide comfort to people by using the best technology in production.***

We try to help you as much as possible in the healing process by keeping your safety in the forefront. And we produce our garments by appropriate safety measures to ensure that you are treated with an ethical and moral manner during your healing-process. Making sure that our fabrics are of the highest quality, we provide the details with great devotion. After making sure that there is no problem, we deliver our products to you. While we aim to benefit people, we give back to what we take from the nature which we are a part of. We do not ignore our respect for nature while producing our products. Because we are EUROPACK we create value for the environment, all living things and humanity

- Memory foam
- Wide soft and comfortable fore area.

ORTHOPEDIC SABO SLIPPERS

Sabo slippers allow comfortable movement without pinching the fingers, thanks to their wide nose structure. If the feet are left without air for a long time, the skin becomes irritated and symptoms such as itching and redness occur. The perforated structure of Sabo slippers prevents the feet from sweating by allowing them to breathe continuously.

SELF AFFLICTED BOOTS

It consists of high quality genuine leather and materials that provide hardness. By keeping the ankle part high, the rotation movement of the foot is prevented. out of classicism, its visuality and lightness come to the fore.

FEATURES

- It is made of high quality natural leather materials and can be used for a long time.
- It can be used easily in all seasons.
- It prevents posture disorders by enabling standing.
- Since the heel part is hard, it prevents the patient's rotation and provides stability.

#### PES PLANUS INSOLE

Pes planus (flat sole) is the type of insoles used in the treatment process. Longitudinal arch support supports the medial arch and distributes the load on the foot equally. Supports in the metatarsal area prevent discomfort that may occur in the metatarsal area. The outer surface covered with antibacterial special fabric reduces the friction between the foot and the insole and prevents odor and moisture.

#### INDICATIONS

- Pes Planus

UCBL

It is a kind of orthosis that distributes the entire weight of the body equally to the foot and wraps the foot. It is produced from rigid thermoplastic material in accordance with the anatomical form of the sole of the foot. It applies three different correction forces to the foot. It grips the heel, controls the inner arch of the foot and the outer border of the forefoot. By eliminating the deformity in the foot, it provides smooth and balanced walking and standing. It supports the anatomical structure of the foot by feeding the foot socket. With its use at an early age and regular use, the success rate of treatment increases considerably.
