WHO ISEUROPACK?

While chasing our dreams, we create value and provide benefits. We make our work a part of our daily routine, we produce while we live, we live while we produce. We care about team awareness, sharing and cooperation, and we continue to learn every day with the excitement of the first day in order to walk confidently into the future. By combining the enormous power of knowledge with dreams, goals and experience, we adopt moderation as a principle and strive to be good for the soul of man. That's why our motto "Catch The Time" is the perfect sentence that expresses **EUROPACK** in two words, in the shortest and clearest way.

as **EUROPACK**, we know well that individuals with a healthy spirit will not suffer from any physical handicap. We design the values and products we produce by focusing primarily on serving human values and then on providing comfort by fulfilling the technical requirements.

We work with innovative principles that can add value to the society we live in, the environment and all living things with whom we share the environment, protect and protect their rights, and include us and the next generations.

We are **EUROPACK**, we set out to support you, add comfort to your life, grow and develop together, fully adhere to ethical principles and rules, and create value for the environment, all living things and humanity.

We look forward to establishing business partnerships with all our partners who share the same excitement as us on this journey, to be inspired by your ideas and to benefit from your experience.

WHY EUROPACK'S PILLOWS & CUSHIONS?

memory foam

1st class visco

ergonomic

anatomic design

antibacterial

eco friendly

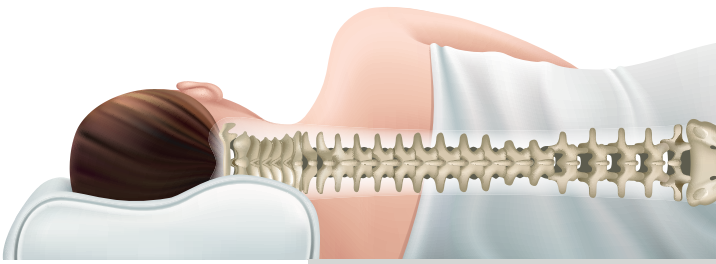

The memory foam technology, known as visco, developed by NASA as a solution to the pressure problem that astronauts are exposed to during space travel, has the ability to reduce pressure.

The visco elastic foam, which has billions of microscopic memory cells, takes the shape of the body sensitively to heat and weight, and adapts perfectly to the body, thanks to the movement ability of its cells.

Memory foam (visco) is a material that has the ability to gain shape with heat. When you put your head on the pillow, the pillow takes the anatomical shape of your neck and ensures that equal pressure is applied to every point. This flexibility is one of the keys to quality sleep.

EUROPACK'S VISCO PILLOW FEATURES

- It allows you to have a peaceful sleep,
- Since it is produced from open-cell viscoelastic material, air circulation is excellent, prevents sweating,
- CFC gas harmful to human health is not used in its production,
- It provides full relaxation of neck and shoulder muscles no matter which position one sleeps in,
- Ideal for people with neck hernia and disorders,
- Suitable for the anatomy of the neck spine,
- It supports and relaxes the neck and shoulder muscles,
- It helps to breathe properly and reduce snoring.

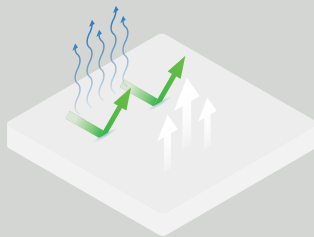

Europack Rehabilitation Products, which are produced in the highest quality in accordance with the body anatomy with the technology of Nasa, offer you an uninterrupted sleep. With its technology, Europack Rehabilitation Products allow your body to maintain its ideal state during sleep and sitting.

MANUFACTURING WITH NATURE LOVE

While we were producing our products, our priority was to contribute to the world we live in the name of formation and protection of ecological balance. During production, we supported our products technically but we did not chose to harm the nature but to be a part of its flow. We used recyclable materail because we want to leave a mark on this world with our name not with our carbon-foot print.

Polyamide, which we use in our products, is completely recyclable. In addition, we designed our products, which are in direct contact with the operation area, with latex-free materials. In this period when latex allergies are intense, we ensure that people who meet with our products after the operation spend this period more comfortably, not more difficult than it already is.

Our products, whose raw materials are natural, provide long-term use, and when they become nusable, they return to nature. During our production, we complete the process with the least resource consumption and preparing our orders. We work without sacrificing our product quality but being aware that we owe to nature.

Since our goals are always oriented towards the future, we believe that it is unfair to think only about the period we live in. Therefore, by using sustainable environmentally friendly materials, we are trying to leave a world that is right of the future generations.
